

Sift-Proof

Application Systems

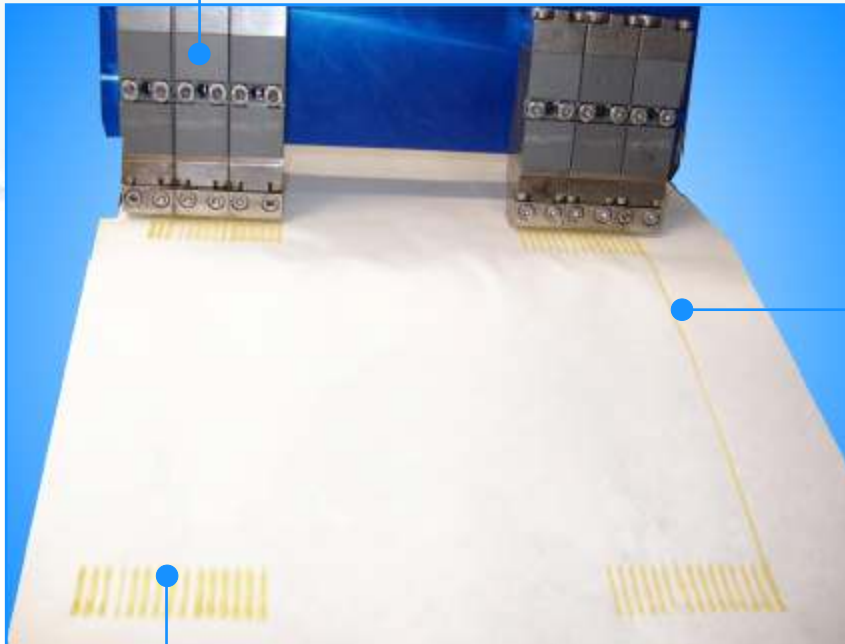

Sift-proof powder box sealing.

MELTON has developed a sift-proof system designed for carton and product assembly. The application is engineered for sealing packages that contain small and dry particles, such as detergent powders and seeds. Melton's sift-proof application can reach high production rates with precision. The sift-proof application heads have snuff back system modules that save adhesive and provide clean cut offs. Sift-proof systems can be customized for each client depending on their different needs. Different nozzles and pattern configurations can be done easily and efficiently.

MELTON's Sift-Proof Application System:

- Snuff back system provides a clean cut off
- Designed for high production rates
- Interchangeable nozzles and patterns
- Customized for each client
- Adhesive quantity controlled
- Easy maintenance

Nozzles are interchangeable: Melton can give each client a different solution depending on the needs in each application.

Unique applicator design uses a separate valve to achieve the critical placement of the "calking" bead.

Our applicators provide high precision placement with superior cut off for a clean, sealed end product.

Sift-Proof Applications

Melton's snuff back system provides a clean cut even at high speed production.

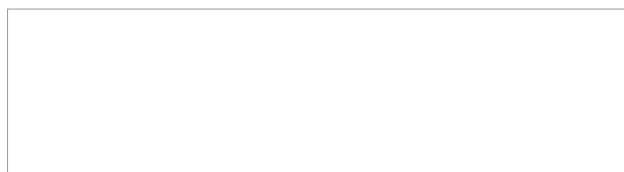

Nozzles can be easily changed in the modules in order to give a customized and more precise cut off.

The sift-proof application is developed with multibead modules that make a perfect seal on all kinds of boxes.

MELTON has designed a selection of nozzles that give the customer maximum flexibility. We can achieve all fixtures and configurations from the standard 6 insert nozzle to any combination using blank inserts in order to give our customers a complete range of choices for carton sealing.
