

# Portable Cutting Machines

## Beaver

The Beaver, developed based on practical experiences, is an universal hand cutting machine for unsteady curved cuts: Vertical and beveling cuts are effected by an angle iron or a guide rail. The unique structure and the changeable distance between guide wheel and drive axle will achieve best cutting results. A long distance between guide wheel and drive axle compasses accurate vertical and beveling cuts, a short distance between guide wheel and drive axle compasses exact scanning accuracy while curved cutting.

- Best properties of straight and radial running characteristics due to the adjustable guide wheel
- Simple and easy operation (single hand control)
- Auto-Stop function

Beaver	
Cutting thickness	3-150 mm
Cutting speed	50-1000 mm/min
Type of drive	IC control, continuous adjustable
Power supply	42V /110V /220V AC selective
Total length	430 mm
Track width	100 mm
Type of gas	Acetylene, propane, natural gas and mapp gas
Weight	9,0 kg

## Handy Auto

The Handy Auto is a portable hand cutting machine with integrated drive system. This allows cutting of all kind and reaches the highest quality at the vertical, circular and shape cutting as well as beveling.

Besides cutting of flat surfaces it is possible to perform curved contours on vertical surfaces as H-beams, pipes and bended plates.

Due to low weight of 2,7 kg only Handy Auto can be used as simple as an ordinary hand cutting torch.

- Easy to operate
- Outstanding quality of cut surfaces
- Cutting works in any direction
- High accuracy and efficiency
- Simple and fast accessory replacement

Handy Auto	
Cutting thickness	3-30 mm
Cutting speed	200-700 mm/min
Type of drive	Transistor control /friction drive
Power supply	110V /220V AC selective, DC 12V
Total length	500 mm
Type of gas	Acetylene, propane, natural gas and mapp gas
Weight	2,7 kg
